Getting Started

Congratulations with your new SuperSail product. We hope you will be satisfied with it and we are available for support if you may need it.

We can be contacted here: support@super-sail.dk

Best Regards

SuperSail Support-Team

Please read the entire installation manual before starting the installation.

Unpacking

Before operating the unit make sure that the packaging does not seem to have been injured during transport, and that the product is complete and without visible signs of damage or overload. If this is not the case, contact SuperSail before using this product.

An alarm package consists of the following. Assembled and configured in SuperSail mobile app:

- SuperSail Marine Alarm
- Connection Box
- Siren
- Movement Sensor
- Remote Controls (2 pcs.)

Installing the Alarm System

The installation includes the following steps:

1. Activate your subscription at your dealer
2. Download SuperSail mobile app for your cell phone via GooglePlay (Android) or AppStore (iPhone)
3. Install the Alarm and your Wireless Sensors in your boat at connect external power

Login to the app., and start using your new SuperSail Marine Alarm.

1. Subscription

   Your SuperSail Marine Alarm is not activated for use, until your subscription is activated.

   Contact you dealer if you have questions related to the subscription.

2. Download and Install the SuperSail mobile App

   All SuperSail units are controlled and operated via the SuperSail mobile app. Find it in the AppStore (iPhone) or Google Play (Android), by searching for "SuperSail" under mobile apps.

   Install the app on your mobile phone. If you want the app installed on your iPAD, you must search for the "SuperSail app in AppStore as an "iPhone App" - not as an "iPAD App".

   Find User's Manual for the SuperSail system and app, by visiting the Super Sails website: www.super-sail.dk/support

3. Connect to External Power

The connection box must be connected to the boat's battery on the primary side of the main switch. Make sure that there is always power to the connection box and thus SuperSail Marine Alarm when you leave the boat. This is a must for the alarm to watch the boat.

The connection box contains a fuse to protect the system.

Remove the bottom of the connection box "Connection Box" by unscrewing the 4 screws in the corners.

12/24V must be connected in the solderless connectors that are located in the top of the cover, as shown in the image below.

Connecting to 24V requires that the Siren is a 24V version. If in doubt, please contact your dealer.

Fit the bottom again and check that the cables are not trapped. Fasten the four screws again.

For proper installation of wireless sensors, refer to the installation manual for these sensors, which are also available at: www.super-sail.dk/support

It will take a few minutes before the alarm has been connected to the GSM network for the first time.

You can now log into your mobile app., using your login information, which is your email address and your password.

.

Disposing

Do not dispose of as household waste.

Electronic equipment must be disposed, in accordance with local rules for electrical and electronic equipment.
