## News!

### News – Information – March 2020

Shortly SuperSail will release the **New SuperSail Owner App. Version 2.8.**

The sailing season 2020 is getting closer and at SuperSail vi are continuously working to further enhance our SuperSail Marine Alarm solution as well as our SuperSail Yacht Monitoring solution for the professional market. Please visit us at: [www.super-sail.dk](http://www.super-sail.dk).

We experience continued customer interest in our solutions for monitoring as well sailing yachts as motor yachts of all sizes and lately we has started delivering telemetry solutions to as well Danish yacht builders as yacht builders worldwide primarily within the "premium brands" segment.

The large yacht builders have recognized the value from utilizing the SuperSail Yacht Monitoring Solution to monitor critical on-board systems and thereby being able to, via alarms and info in our **SuperSail Service App**, alert yacht owners of ie. battery discharge issues, misuse of bow thruster etc.

Please take a few minutes to familiarize you with the latest new functions and features to ensure you get the maximum value from your SuperSail Marine Alarm.

**Version 2.8 of the SuperSail Owner App will be available in a few days:**

Our new Version 2.8 of the SuperSail Marine Alarm App. will be released to AppStore and PlayStore within a few days.

New functions and features in SuperSail Owner App. Version 2.8

- Clear indication on the frontpage if the alarm is off-line. In case the alarm is off-line – it can be caused by lack of GSM-signal, jamming or if the battery has run dry – the **ALARM STATUS** on the frontpage will be marked with **red** indicating Alarm is Off-line.
- Graph showing battery current. Until now you have been able to see the actual battery voltage. Now it is possible to see the historic voltage on the battery. Thereby you are able to see when the battery has been charged and how the usage pattern has influenced the battery voltage. You enter the menu ALARM STATUS and push the ikon: 
- Timer function - Output #3, #4, #5 og #6. From our users we have received a wish to extend the possibility to remote control on-board equipment ie. Cabin light by means of a timer function (ON - OFF). This enables you to, daily, turn ie. the cabin light, underwater light, deck light, heating on and off. In the menu OUTPUT SETTINGS, you can set the ON and OFF time for the 4 outputs.
- Puls-function for Output #3, #4, #5 and #6. In several new and larger yachts ie. the light is controlled by relays which are activated by so called pulse switches sending a pulse to the relay. If your boat is equipped with pulse switches, go to OUTPUT SETTINGS and activate (ticmark) pulse for the specific output – now you can remote - and timer control the on-board light when the on-board light is controlled by a pulse.

Remember:

- The battery level in the wireless sensors are measured every time the sensor is activated (i.e. every time you pass by the movement sensor, opens a hatch etc. - both when the alarm is ON and OFF) and an SMS is sent if the battery level in a wireless sensor is too low. However, we still recommend changing batteries in all wireless sensors once every year in order to ensure optimal signal and security.
- The User Settings button is shown with a red ikon in case no mobile telephone numbers are entered the alarm recipient list.
- If a temperature sensor is attached, the temperature ikon figures will be shown in red, in case the temperature is not updated, i.e. if the sensor has run out of battery.

What to do:

- From AppStore for iOS telephones and from PlayStore for Android telephones you will **receive a notification** when the new SuperSail Version 2.8 App. is available.
- Your settings will **not be changed** when you install the new App.
- When the App. is installed you just **use your present login**.
- We **recommend that you update to the new Version 2.8** in order to ensure that the latest security updates will be applied.

Our many wireless sensors can easily be retrofitted and thereby further improving the monitoring of your yacht.

Spring 2020 special offer to our SuperSail Marine Alarm users:

The winter 2019 is getting closer and therefore we have an exclusive winter offering for our SuperSail users - A SuperSail wireless temperature sensor with a **15% discount 115 EUR excl. transport.**

A **SuperSail temperature sensor** which shows the actual temperature in a specific location in your yacht, can give you an “**overheat**” or **frost alarm** – you determine the temperature limits.

You order the temperature sensor using: [info@super-sail.dk](mailto:info@super-sail.dk).

You are indeed welcome to contact us in order to get information and advice with respect to all the possibilities you have as a SuperSail Marine Alarm user.

We are also very interested in your feed-back and good ideas – so do not hesitate to contact us!

SuperSail wishes you a good and safe sailing season 2020!
